January 14, 2022

Dear Stuyvesant Math Student,

If you are currently enrolled in Geometry, Algebra 2, Honors Algebra 2, or Pre-Calculus, you will be taking the final exam on Wednesday, January 26, 2022. Like the summer assignment exam, you will complete the final on DeltaMath. The exam will be posted under the departmental account, not your teacher's DeltaMath account. As a reminder, that teacher code is 595791. During the testing window, the assessment will appear under the "Upcoming Assignments" heading.

The exam will open at 4:00 p.m. and close at 11:59 p.m. on January 26th. You may complete the exam at any time during the testing window. **You will need to complete the entire exam in the allotted time. You may not save your work and return to it later; it must all be completed at once.** If you have extended time, the program will automatically give you the extension to which are entitled. The testing times for each course are as follows:

- Geometry: 75 minutes
- Algebra 2: 90 minutes
- Pre-Calculus: 45 minutes

The testing portal will close automatically, and you will not be able to return to submit any additional work after time has expired.

While taking the exam, please be mindful of the following guidelines and expectations:

1. **Written work:** You will upload your work on Google Classroom as soon as you have completed the exam. Your teacher will create an assignment where you can upload this work. You must upload your work within 10 minutes of completing the exam, or you run the risk of having your score invalidated.
2. **Calculator:** You may use your own graphing calculator, Desmos, or the calculator on DeltaMath.
3. **Notes:** While you have access to your notes while taking the exam, we strongly advise you not to use them, as doing so may limit the amount of time you have to complete all of the questions.
4. **Numeric answers:** Unless you are specifically told to round your answer, DeltaMath expects you to express your answer as an exact value. If you include a decimal answer instead of the exact value, your answer will be marked incorrect. For example, if you use your calculator to compute $\frac{\sqrt{3}}{2}$ and express your answer as a decimal, it will be marked incorrect.
5. **Equation vs. expression:** If the question asks you to express your answer as an equation, the answer will be marked incorrect if your answer is an expression. For example, if the correct answer is meant to be the equation $y = 2x + 1$ and you enter $2x + 1$ as your answer, it will be marked incorrect.
6. **Questions:** If you have any questions or concerns while taking the exam, please email Mr. Smith at ESmith42@schools.nyc.gov.

You may not use any other websites or online programs to answer any of the questions, nor may you consult any other student. As this is an exam, the [Academic Integrity Policy](#) will apply.

Good luck!

Sincerely,
The Stuyvesant High School Math Department
